SUMMARY

Data Engineer with strong expertise in Python, SQL, Spark, and cloud-based ETL pipelines. Experienced in building scalable data processing systems and automating data orchestration using Airflow and Azure Data Factory for analytics and reporting.

EDUCATION

GRADUATION **2020-2024**

LNCT - B.Tech - Electrical and Electronics Engineering - CGPA–8.11 *Bhopal, Madhya Pradesh*

TECHNICAL SKILLS

Languages: Python, SQL, C & C++ (Basics)
Data Engineering: Spark, PySpark, Spark SQL, Airflow, ETL Pipelines
Cloud: GCP (BigQuery, Pub/Sub, Cloud Storage, Spanner, Cloud Run, Secret Manager)
Backend: FastAPI, Flask, REST APIs
DevOps: Docker, Kubernetes, Jenkins, CI/CD
Orchestration: Airflow, CI/CD Pipeline, CRON
Tools: Git, Jira, VS Code, Databricks

EXPERIENCE

Software Engineer at Capgemini **June 2025 - Present**

- Built Master Data Management (MDM) for healthcare to centralize and standardize patient information, including patient details, and interaction history.
- Built and deployed RESTful microservices using Flask, modularizing core services with an average service response time of 200ms under load.
- Utilised **GCP Pub/Sub, Cloud Storage, Secret Manager, BigQuery, and Cloud Spanner** to handle and persist **200k** daily records, ensuring secure and scalable data flow.
- Used Jenkins CI/CD pipelines, enabling progressive deployments with 99.9% system uptime and seamless service updates.

Data Engineer at VNC Digital Services Private Limited **Jan 2025 - June 2025**

- Created an API service using Python to generate dynamic DAGs in Apache Airflow.
- Implemented scheduling capabilities, allowing for the efficient orchestration of data pipelines, and optimizing data processing workflows.
- Enabled auto-DAG creation and scheduling via SSH, reducing developer and operations time by at least one hour per script, while minimizing errors and enhancing efficiency under increased loads.

Intern at Reliance JIO **Oct 2024 - Dec 2024**

- Developed an automated invoicing system for dynamic cloud pricing, ensuring accurate monthly billing adjustments and improving invoicing accuracy by 100%.
- Integrated and processed billing data from multiple sources including **AWS and GCP** handling various file formats like JSON,CSV, and Parquet .
- Implemented Spark optimization techniques such as caching, and broadcast joins, resulting in a 20% decrease in processing time for handling a daily load of around **2 million** records .

PROJECTS

COVID-19 Reporting Prediction System (ADF, Python, SQL) **Jan 2026 - Feb 2026**

- Built a scalable data processing system using Python and Azure Data Factory to collect, process, and prepare COVID-19 datasets for analytics and prediction.
- Implemented modular transformation logic and optimized data workflows to ensure accurate trend reporting and efficient data processing.
- Developed time-series prediction functionality and integrated analytical outputs into dashboards for real-time monitoring and insights.
